Technical Report
No. 5356410/1

Date of report: 10 December 2013

Manufacturer: Hella KGaA Hueck & Co.
Rixbecker Strasse 75
59552 Lippstadt
Germany

Test object: 12" LED Threshold Straight Inset Green
Model description: 012.189-00 ... -03 and THR-S-I-32-G00000-1-xO-10x0
Version / Variant: 6,6A / Borosilicat glass
Brand name: HELLA
Light source(s): 3x 2 LEDs (green)

Object of the report: Test of the photometrical and colorimetric performance of aeronautical ground light(s), markings, signs and panels

Relevant standard(s) / Specification(s):
Photometry – Figure A2-3 in conjunction with chapter 5.3.10.10
Chromaticity – Figure A1-1 (green)

Performed tests: Measurement of the light distribution and determination of the minimum allowable luminous intensities and the colour of the light emitted according to the mentioned standard(s) / specification(s) above.

Test instruments and measurement conditions:
Measurement system: LMT GO-H 1300
Measuring distance: 25,0 m
Power supply: FUG NTN 700M-35
Multimeter (Voltage): Keithley Model 2000
Multimeter (Current): Keithley Model 2000 and calibration resistor KW-0.01
Lamp(s) adjusted to: Current 6,60 A
Ambient temperature: 25°C ± 3°C
Test object: 12" LED Threshold Straight Inset Green
Manufacturer: Hella KGaA Hueck & Co.

Test procedure:

- The test object was mounted on the Goniometer table according to the instruction of the manufacturer and aligned that the reference axes is in the rotation centre of the Goniometer.
- In accordance to the specification(s) mentioned above the test object was aimed by the goniometer to the following offset angles:
  - Horizontal: 0,0°
  - Vertical: 0,0°
- The test object was stabilized at constant DC Current 6,60 A for at least 1 h before starting the measurement.

Test results:

The test results refer exclusively to the allocated and in the report described sample(s) of the test object (see picture(s) of the test object in Appendix 3).

The test object does fulfil the photometrical requirements (Figure A2-3 in conjunction with chapter 5.3.10.10) of the mentioned standard(s)/specification(s). In Appendix 1 are shown the test results in detail.

Furthermore the test object does fulfil the colorimetric requirements (Figure A1-1 (green)) of the mentioned standard(s)/specification(s). In Appendix 2 are shown the test results in detail.

Date:
10 December 2013

Dipl.-Ing. Fabian Stahl
Head of Laboratory

Dipl.-Ing. Heiko Herzberg
Test Engineer

The Test Report shall be reproduced and published in full by the client only. It shall however be reproduced partially with the written permission of the Testing Laboratory only.

The relative expanded measurement uncertainty for the illuminance values are ± 5,8 %. The reported measured values and the associated uncertainties represent the interval which contains the value of the measured quantity with a probability of at least 95 %. Reported is the measurement uncertainty that results from the standard uncertainty multiplied by the coverage factor k=2. The calculation is based on the CIE 198:2011 “Determination of measurement uncertainties in photometry.” The total measurement uncertainty entails contributions of the measurement standard, the calibration method, the environmental conditions, as well as the measuring object.
### Results of the photometrical test(s)
