AVANT-PROPOS

OPTEZ POUR LE MEILLEUR : LES LAMPES HELLA.

À la pointe de la technologie dans les systèmes intelligents de répartition lumineuse, les projecteurs halogènes, au xénon et 100 % LED, et en tant que partenaire des constructeurs automobiles de renom, HELLA satisfait en permanence aux exigences et aux normes de qualité les plus sévères. Un principe que nous appliquons également à notre gamme de lampes à incandescence : une technologie de pointe avec une qualité éprouvée, ne laissant place à aucun compromis. Sur le terrain, cela signifie une meilleure visibilité avec une qualité d'éclairage optimale et des taux de défaillance les plus faibles possibles grâce à des produits résistants et durables.

La gamme couvre un large champ d'applications : tous les types de véhicules – par exemple VP, VUL, véhicules spéciaux et motos –, des projecteurs et des feux, l'éclairage intérieur, l'éclairage halogène classique ainsi que l'éclairage au xénon. Le tout à un excellent rapport qualité/prix.

UNE QUALITÉ ÉPROUVÉE

Toutes les lampes à incandescence HELLA sont contrôlées avec la plus grande précision. Les ingénieurs HELLA de l'Assurance Qualité ont défini un profil d'exigences clair pour chaque type de lampe.

Nos ingénieurs testent par exemple les caractéristiques de répartition lumineuse des lampes de projecteurs de façon extrêmement précise. Et pour ce faire, ils utilisent des équipements photométriques ultramodernes.

Les essais d'adhérence de peinture suivant FAKRA (milieu spécialisé de l'automobile), les tests de résistance aux vibrations et aux chocs suivant la CEI, les mesures géométriques, les mesures de flux lumineux et de puissance ainsi que les essais d'endurance sont la garantie que les grossistes et les garages reçoivent des produits d'une qualité indiscutable.

L'assurance qualité, un sujet majeur à nos yeux

Nous voulons votre satisfaction et, par conséquent, celle de vos clients. C'est la raison pour laquelle les ingénieurs Qualité HELLA testent toutes nos lampes à incandescence de façon approfondie et vous assurent de cette manière une qualité élevée.

Avec ces tests détaillés et notre savoir-faire d'expert en éclairage première monte, vous pouvez être sûr que nous vous garantissons un haut niveau de qualité.

Une qualité rigoureusement contrôlée

Depuis des années déjà, les constructeurs automobiles de renom misent sur nos innovations technologiques et font confiance à la compétence, à l'expérience et à la qualité HELLA.

Mesure géométrique

La géométrie des filaments est contrôlée dans un projecteur de mesure – conformément aux normes légales CEI 60810. Le filament doit présenter la taille et la position – à l'intérieur de la lampe – définies dans la norme. C'est ainsi que l'on obtient une puissance lumineuse optimale dans les projecteurs tout en évitant l'éblouissement des automobilistes venant en sens inverse.

Test de résistance aux vibrations et aux chocs

La résistance des lampes aux vibrations et en particulier des filaments est testée sur une table vibrante électrodynamique.

Essai d'adhérence de peinture

L'adhérence de la peinture de lampes colorées – comme par exemple la PY21W – est contrôlée dans une enceinte climatique à différentes températures et humidités de l'air. Une adhérence optimale de la peinture des lampes garantit le clignotement orange pendant toute la durée de vie du feu clignotant.

Essais d'endurance

De nombreux tests démontrent la grande fiabilité des lampes à incandescence HELLA sur une longue période.

Mesure du flux lumineux

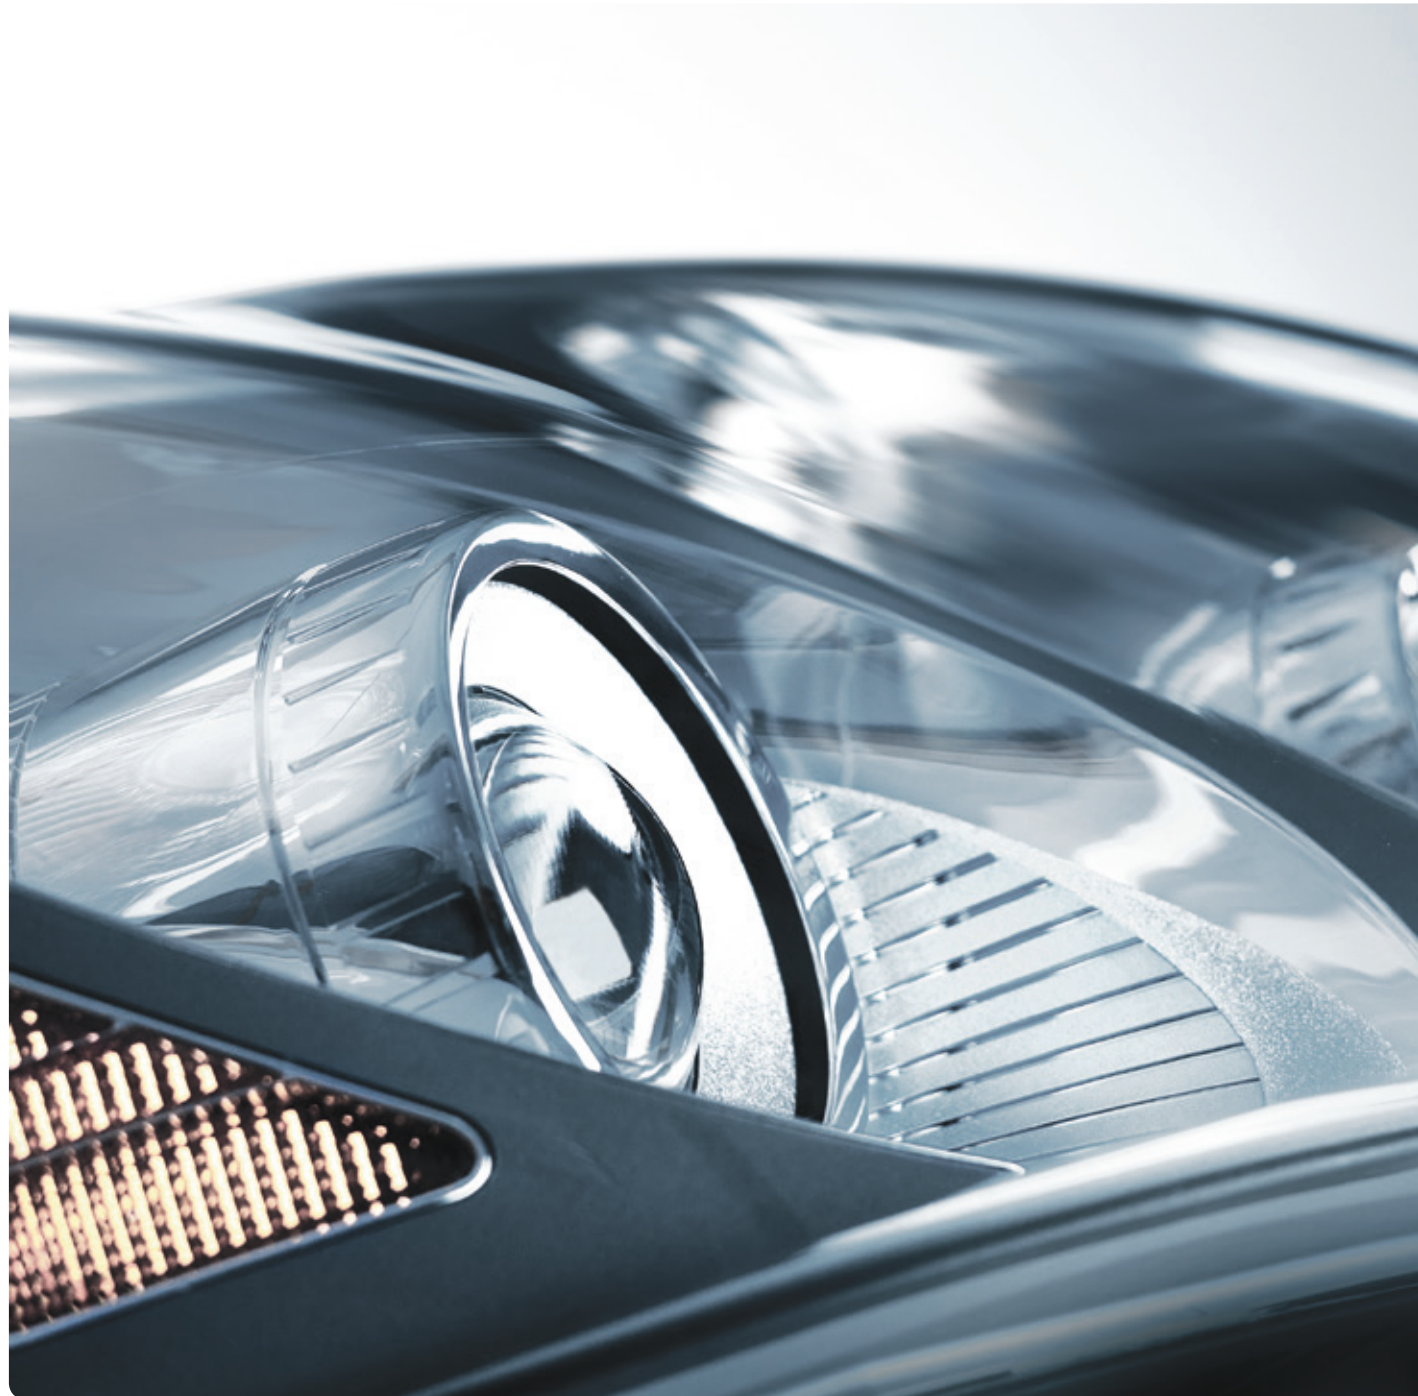

Les flux lumineux et les intensités lumineuses des lampes à incandescence HELLA sont déterminés dans la sphère d'Ulbricht ainsi qu'au goniomètre. Une efficacité lumineuse optimale des lampes à incandescence est ainsi assurée.

Ces tests et mesures constituent la base de notre qualité éprouvée.

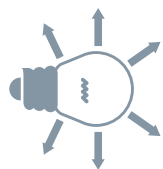

SOURCES LUMINEUSES

Une bonne visibilité est le critère le plus important pour garantir la sécurité routière. Divers éléments peuvent cependant l'altérer, comme le crépuscule, de mauvaises conditions météorologiques et des pare-brises sales entre autres. Dans de telles conditions de conduite, le risque d'accident est relativement élevé.

De même, l'évolution et l'accroissement continu de la mobilité et de la densité de circulation contribuent à l'augmentation du risque. Afin de surmonter ces défis, nous travaillons sans cesse à l'amélioration des systèmes d'éclairage existants et au développement de nouveaux systèmes.

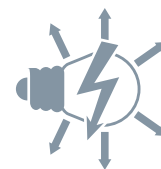

Ci-dessous sont décrits les principaux termes de base de la technologie d'éclairage ainsi que les unités de mesure correspondantes aux lampes et à la luminosité.

Flux lumineux Φ

Unité : lumen [lm]

Le flux lumineux F désigne la puissance lumineuse totale émise par une source de lumière.

Efficacité lumineuse η

Unité : lumen par watt [lm/W]

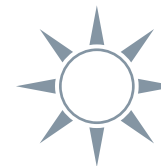

L'efficacité lumineuse η indique le rendement avec lequel l'énergie électrique absorbée se transforme en lumière.

Intensité lumineuse I

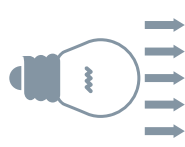

Unité : candela [cd]

C'est une partie du flux lumineux rayonnant dans une direction donnée.

Sources lumineuses

Les sources lumineuses sont des corps thermo rayonnants qui génèrent de la lumière due à l'énergie thermique. Donc plus une source lumineuse chauffe, plus l'intensité lumineuse est élevée.

Intensité d'éclairage E

Unité : lux [lx]

L'intensité d'éclairage E décrit le rapport entre le flux lumineux et la surface éclairée. L'intensité d'éclairage est de 1 lx lorsqu'un flux lumineux de 1 lm éclaire une surface de 1 m².

Luminance L

Unité : candela par mètre carré [cd/m²]

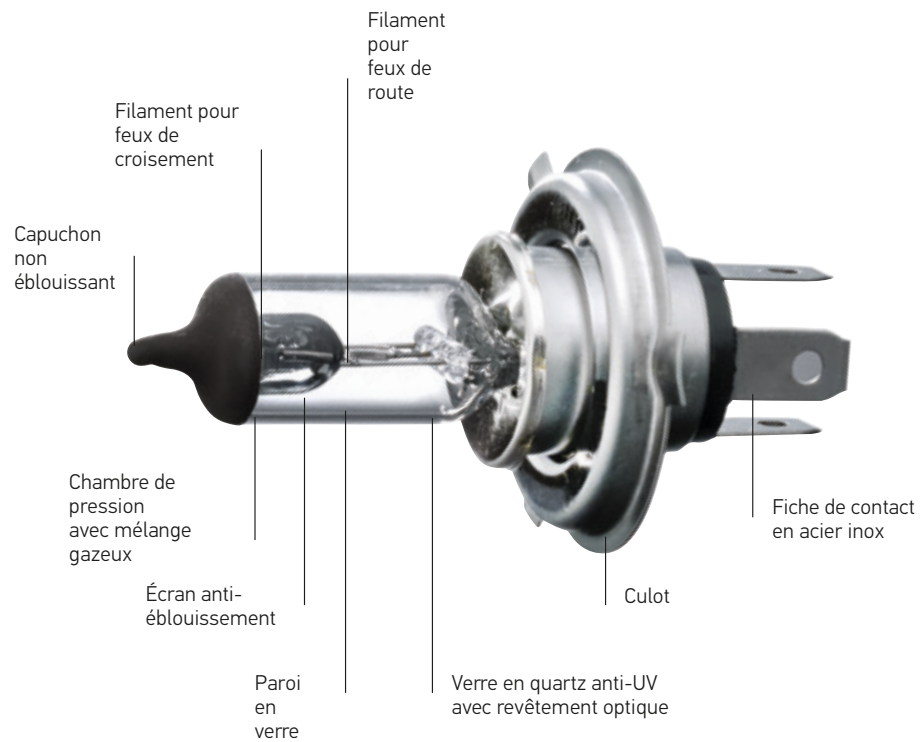

La luminance L décrit la façon dont l'œil perçoit la luminosité sur une surface lumineuse ou éclairée.

SOURCES LUMINEUSES - COMPARAISON

LAMPE HALOGÈNE H4

Les lampes halogènes sont en réalité des corps thermo-rayonnants qui transforment l'énergie thermique en lumière. Sous tension, le filament est porté à incandescence et produit de la lumière.

Le rendement d'une lampe halogène standard se situe à environ 8 %. Environ 92 % de l'énergie est perdu en rayonnement thermique.

La répartition lumineuse et la température de couleur typiques d'un projecteur avec des lampes halogènes.

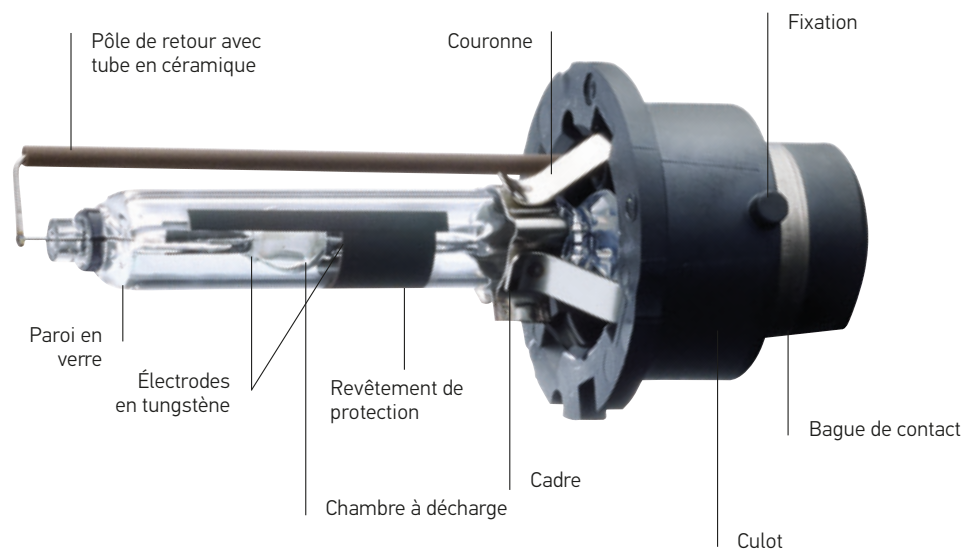

LAMPES À DÉCHARGE D2R

Les lampes à décharge sont également appelées lampes xénon en raison du remplissage au gaz xénon. Un ballast produit une tension électrique élevée, qui amorce une décharge électrique gazeuse dans la chambre à décharge et génère un arc lumineux très clair. Le rendement lumineux d'une lampe à décharge est 3,5 fois plus élevé que celui d'une lampe halogène (28 % de

rayonnement lumineux). En raison de leur meilleure efficacité lumineuse, à consommation d'énergie égale, les lampes à décharge peuvent produire plus de lumière que les lampes halogènes. Par conséquent, à taille égale, une lampe à décharge peut générer une répartition lumineuse plus forte.

SPECTRE DE COULEURS DES TEMPÉRATURES DE COULEUR TYPIQUES

La température de couleur de la lumière des lampes est mesurée en Kelvin (symbole K). Les températures de couleur supérieures à 4000 K sont décrites comme des couleurs froides (blanc/bleuâtre) alors que les températures inférieures (jaunâtre à rougeâtre) sont décrites comme des couleurs chaudes. Plus la

température d'une source lumineuse est élevée, plus la composante bleuâtre est grande dans le spectre de couleurs. Plus la température de couleur est élevée, plus le confort visuel est important. Vous pouvez voir le spectre des températures de couleur dans l'illustration suivante.

CONSIGNES DE SÉCURITÉ

REMPACEMENT ET MISE EN PLACE D'UNE LAMPE

Lors de la mise en place d'une nouvelle lampe, faites attention à ne pas toucher la lampe car les empreintes digitales peuvent être fixées par la chaleur et laisser des traces sur le verre.

Les lampes à incandescence et halogènes standard ne contiennent pas de substance nuisible pour l'environnement et peuvent être jetées avec les déchets domestiques.

Consultez les réglementations locales afin de jeter les lampes dans les lieux de collecte prévus à cet effet.

HELLA recommande de remplacer les deux lampes lorsque l'une d'elles a claqué.

NOUVELLE PRÉSENTATION

CHROME TOP 2.0

La nouvelle Chrome Top 2.0 allie esthétique et efficacité : le capuchon chromé brillant apporte une touche tendance et élégante dans les projecteurs à glace lisse et transparente. Disposant d'une meilleure luminosité* et d'un faisceau* jusqu'à 50 m plus long, cette lampe à incandescence permet d'augmenter la visibilité jusqu'à 100 % sur la chaussée. La lumière plus blanche est obtenue par un procédé de revêtement spécial.

SUPER LONG LIFE

La lampe idéale pour les habitués de la route : la nouvelle Super Long Life de HELLA. Une durée de vie maximale avec une durée de fonctionnement* trois fois plus longue offre un rapport qualité-prix optimal, les lampes devant être changées plus rarement.

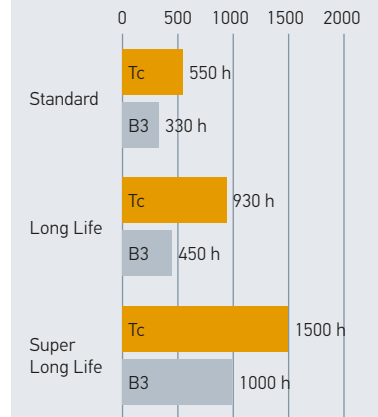

B3

Nombre d'heures après lesquelles un minimum de 97 % des lampes testées fonctionnent encore.

Tc

Nombre d'heures après lesquelles 36,8 % des lampes testées fonctionnent encore. La valeur Tc, aussi appelée valeur Weibull, est l'unité usuelle permettant d'exprimer la durée de vie des lampes à incandescence et de les comparer les unes aux autres.

PERFORMANCE : POUR PLUS DE LUMIÈRE

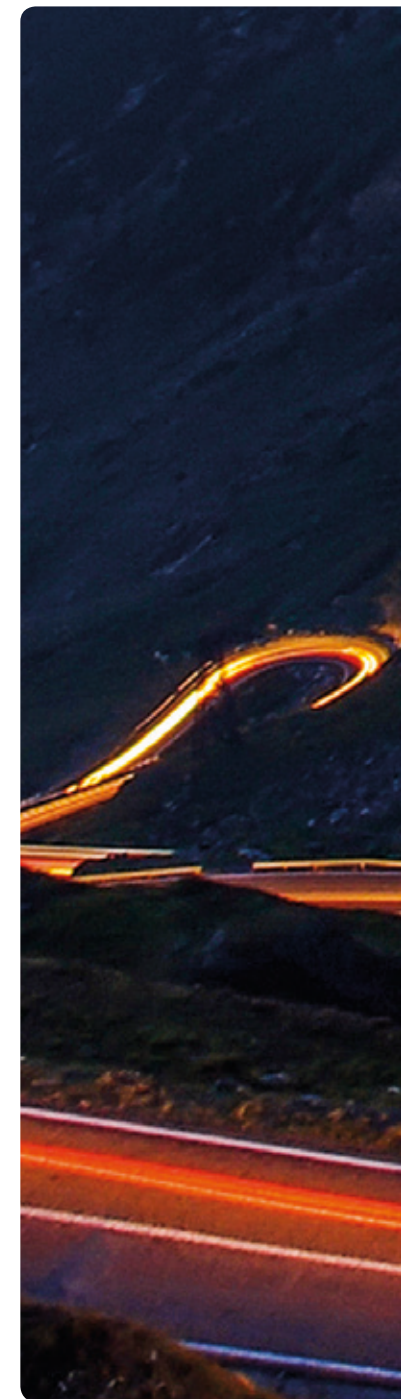

Grâce à une technologie innovante, les lampes Performance HELLA présentent un éclairage plus important que les lampes à incandescence : l'entrée de gamme dans la catégorie Performance commence avec la Performance +30 avec jusqu'à 30 % de lumière en plus* et une durée de vie plus longue.

Avec 50 % de lumière* en plus et un faisceau* lumineux prolongé de près de 20 %, la Performance +50 apporte une sécurité supplémentaire au conducteur sensible à un maximum d'efficacité.

A la pointe des lampes Performance halogènes HELLA, on peut citer les +90 et +120, qui grâce à un filament et un processus de revêtement très spécifique ainsi qu'un remplissage à 100 % de gaz rare donnent un maximum de puissance dans la catégorie des lampes halogènes.

DESIGN : POUR PLUS DE STYLE

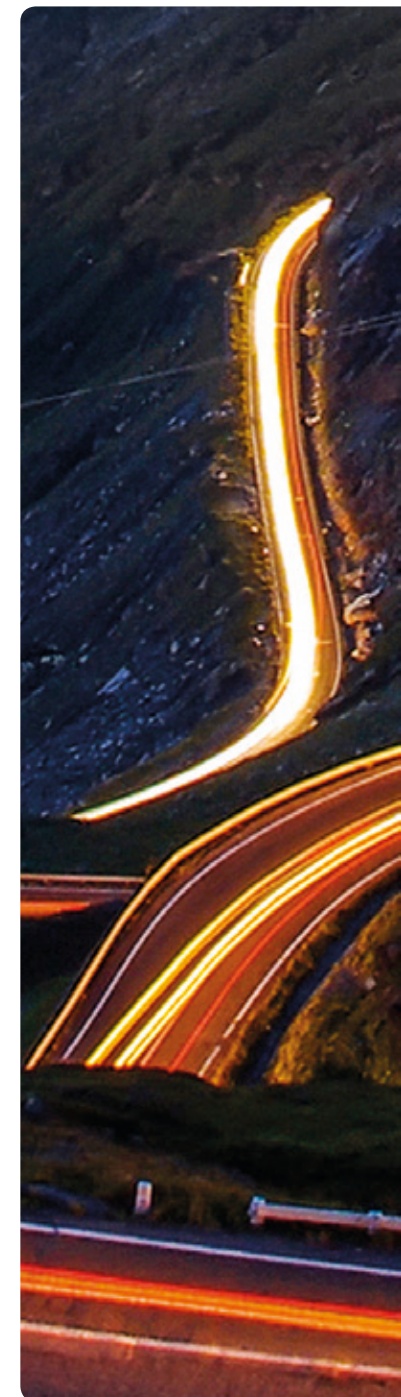

Nos lampes Design répondent à des exigences spécifiques en matière d'esthétisme et de sécurité de conduite : avec l'effet xénon bleuté, la Blue Light constitue une alternative pour le conducteur sensible à l'esthétique : avec un procédé de revêtement spéciale, les lampes HELLA Blue Light atteignent une température de couleur de 4000 K, comme une lampe xénon et 20 % de luminosité* en plus. La lumière "blanc-bleu" assure un meilleur éclairage de la chaussée et davantage de confort de conduite et de visibilité.

HELLA propose également un vrai plus dans le domaine de la signalisation : les clignotants Magic Start HELLA ont été spécialement développés pour les optiques en verre transparent. Avec un revêtement à effet spécial, elles conviennent très bien au réflecteur argenté et ne s'activent qu'au clignotement orange. En comparaison aux lampes de clignotants courantes, elles ont une durée de vie deux fois plus longue.

XÉNON : POUR PLUS DE PUISSANCE

Cela fait plus de 100 ans que HELLA occupe la place de leader technologique pour les automobilistes afin de voir et d'être vu de façon optimale. La technologie xénon moderne constitue ici une étape majeure en termes de sécurité, de conduite et de confort. Avec une température de couleur jusqu'à 4300 Kelvin, une clarté doublée et un rendement lumineux près de trois fois plus grand qu'une lampe halogène standard, l'éclairage blanc au xénon procure des conditions de visibilité, de sécurité et de conduite optimales.

Les nouvelles lampes +30 XENON ont une température de couleur jusqu'à 5000 K très proche de l'éclairage de jour des LED blanches sur les véhicules récents. Ainsi, elles offrent un maximum d'éclairage diurne et de visibilité.

Avantages des ampoules à décharge

- Répartition lumineuse claire et plus large
- Longue durée de vie
- Faible puissance absorbée
- La température de couleur élevée assure une lumière blanche
- Répartition lumineuse homogène (pas de zones d'ombres)
- Résistante aux vibrations

BOÎTES DE LAMPES

POUR ÊTRE TOUJOURS PRÊT

Les lampes de véhicules se cassent la plupart du temps à l'allumage, dans l'obscurité et pendant les trajets. Dans de telles situations, il n'est pas facile d'accéder rapidement à la pièce de rechange. Afin de se préparer au mieux à de telles situations, HELLA propose différentes boîtes de rangement avec un équipement individuel.

Une bonne visibilité dans toutes les situations est essentielle pour une conduite en toute sécurité. C'est la raison pour laquelle HELLA propose des boîtes de rangement contenant les lampes les plus courantes, mais également les lampes de signalisation/clignotant, des lampes de balisage ainsi qu'une sélection de fusibles.
