

FORVIA HELLA End User and Consumer Information on Packaging

in accordance with EU Regulation (EU) 2025/40 – PPWR

Objective of this information

FORVIA HELLA informs end users, especially consumers, about the use, Reusing and disposal of packaging in accordance with the Requirements of the PPWR. The following tips help to separate packaging correctly and contribute to the circular economy.

Labeling of FORVIA HELLA Packaging

FORVIA HELLA's packaging will be labelled in accordance with the Requirements of the Regulation. The European Commission will define the harmonized markings and their specific design by means of further implementing acts. FORVIA HELLA will supplement and update the relevant information once these requirements are available. These labels will help to:

- Recognize the material composition of the Packaging,
- Assign the Packaging to the correct waste stream,
- ensure proper disposal

The symbols on the Packaging are the same as those on the waste bins, making it easy to identify.

Consumer contribution to the circular economy and advice on packaging disposal

End users / consumers can contribute to the prevention of packaging waste by using packaging solutions that are reusable for as long as possible, as well as by emptying packaging completely and collecting packaging waste properly separated. As an end customer / consumer, please observe the following basic rules in order to contribute to Sustainability and resource conservation:

- Packaging should not be disposed of in the environment so as not to pollute it and not to pollute animals and nature.
- Packaging must be collected and disposed of separately according to the marking. Please observe the local disposal rules (e.g. yellow bag, paper,

glass). Additional information on waste separation and local systems can be obtained from the responsible municipal disposal points and the official environment and waste portals in your country.

Proper separation of packaging waste supports recycling processes and helps to improve the Quality of recovered materials and promote their further use as secondary raw materials.

- Where possible, use reuse systems and return packaging. Reusable packaging is labelled accordingly. As a consumer, please use existing return or reuse systems. If digital markings or other digital data carriers are provided on packaging, additional information on reuse systems or available return options can be retrieved.

Reliable and transparent information

FORVIA HELL is committed to clear and understandable Communication:

- Use of standardised, easy-to-understand symbols,
- Reduction of text to the necessary minimum,
- Refraining from misleading Sustainability or Recyclability claims

Additional digital information

Digital solutions enable uniform and expandable information to be provided. On selected packaging, FORVIA HELL provides additional information via digital data carriers (e.g. QR Codes). These can include:

- detailed information on disposal,
- Information on reuse systems,
- Location of return points,
- Information on material and packaging properties

This consumer information is reviewed regularly and updated in the event of Changes in the Legal Requirements or the labelling requirements.
