

PRODUCT INFORMATION

FOG LIGHTS

- Outstanding light performance: The powerful light output of our fog lamps means drivers always achieve optimum visibility in difficult visibility conditions, just like with the original car equipment.
- Business made easy: Our OE range offers you as a wholesaler a comprehensive range of products from a single source to make your business as simple and successful as possible.
- Time is money: We bring the products we develop for series production to the independent aftermarket in good time. As a wholesaler, this means that you can supply your customers with the latest spare parts at an early stage and continually improve the service in the aftermarket.

PRODUCT FEATURES

Discover the essential advantages of our fog lamps: By replacing the original part like for like, we enable you to integrate it seamlessly into the vehicle without compromising on quality or accuracy of fit. As a wholesaler, you can therefore offer your customers trouble-free installation and reliable vehicle lighting.

Clear visibility even in fog and heavy rain

In everyday life, there are many situations in which the quality of the lighting systems is put to the test – for example in dense fog, heavy rain or snowfall. In these conditions, HELLA's lamps make a significant contribution to road safety, ensuring mobility even in adverse weather conditions.

With over 120 years of experience in the field of lighting systems, HELLA transfers OE competence and parts to the independent aftermarket, contributing towards ensuring mobility even in adverse weather conditions.

Strong lighting competence with HELLA

HELLA has a broad IAM range in OE quality and is the market leader for innovative lighting technologies. Our products for the independent aftermarket have the same quality levels offered in series production. Our headlamps, rear lamps and fog lamps are produced in the same factories. The production lines and machines are also identical. We also apply the same elaborate testing procedures. We have been developing vehicle lighting for more than 120 years and are pioneers in the latest lighting technologies: for example, SSLJHD technology is new from the HELLA name. SSL stands for „Solid State Lighting“, which is finding its way onto the independent aftermarket. The technology is based on the principle of miniaturisation. In this video, you can find out what is behind it and how it can increase road safety, as well as all other important information about HELLA's lighting expertise.
