

PRODUCT INFORMATION

Fuel Filler Door Actuator

- Lock in fuel security with a precision-engineered filler door actuator
- Durable, reliable, and built to protect the fuel tank access
- Seamless performance for worry-free fuel access and enhanced vehicle safety
- OE Quality

PRODUCT FEATURES

A fuel filler door lock actuator is a compact electric motor device that enables you to open and close your vehicle's gas tank door with the push of a button from inside the car. It serves as a motorized locking mechanism that can be controlled electronically, removing the need to manually open the fuel door. It operates by sending a signal to a motor, which then activates a latch mechanism to either lock or unlock the fuel door based on the received command.

Product Replacement / Lifespan:

When the actuator starts to malfunction, intermittent issues of the door automatically opening or not unlocking upon command will occur. In some cases, it can stop working altogether, rendering it unresponsive no matter how often you push the button.

Functions:

- Motorized operation: It uses a small electric motor to power the locking mechanism.
- Control by switch: The actuator is activated by a button inside the car, sending a signal to engage the motor.
- Locking mechanism: The motor is connected to a latch mechanism that secures the fuel door when locked.
- Convenience feature: This allows drivers to open the fuel door without leaving the vehicle.
