

# PRODUCT INFORMATION

## WORK LIGHTS

- Powerful LED technology for reliable illumination in poor lighting conditions
- Versatility in the range: Various designs and sizes for different applications
- Trouble-free operation: ECE R10 certification guarantees electromagnetic compatibility
- Easy installation: Fast retrofitting and no-fuss handling for your customers

## PRODUCT FEATURES

### Powerful lighting for vehicles used in construction, forestry and agriculture

Regardless of whether your customers work in the construction, forestry or agricultural sector – reliable light is essential in order to be able to work efficiently and safely in the dark. With their homogeneous illumination, the powerful work lights from HELLA offer an ideal solution. And with a colour temperature of 6,500 kelvins, which is similar to daylight, they improve contrast rendition and make it easier to recognise colours at night. This supports fatigue-free and safe working. In addition, our variants with ECE R10 certification (EMC protection) ensure trouble-free use by minimising electromagnetic interference.

### Work lights for every customer's requirements

HELLA offers a wide range of work lights that have been developed for different areas of application. Whether in the construction industry, forestry or in the world of agriculture – our products are tailored to suit a variety of requirements. This enables you as a dealer to respond flexibly

to the specific needs of your customers. The selection ranges from compact models to powerful LED solutions that provide reliable lighting under demanding conditions.

- **For the construction industry:** Precise lighting on construction sites, even in poor weather conditions
- **In forestry operations:** Clear visibility in dense forests, a situation which improves work safety and work efficiency
- **In agriculture:** Indispensable support for field work and machine maintenance
- **For forklift trucks:** Optimal illumination for safe and efficient work processes in warehouses and on company premises

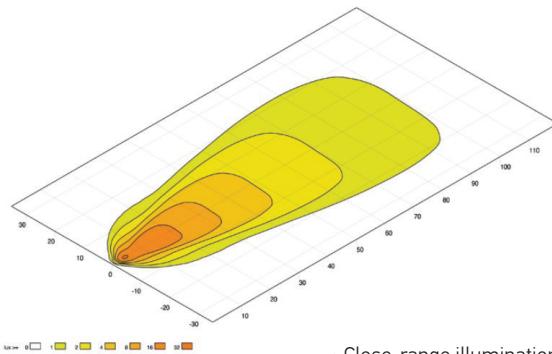

# WORK LIGHTS

## The illumination variants available

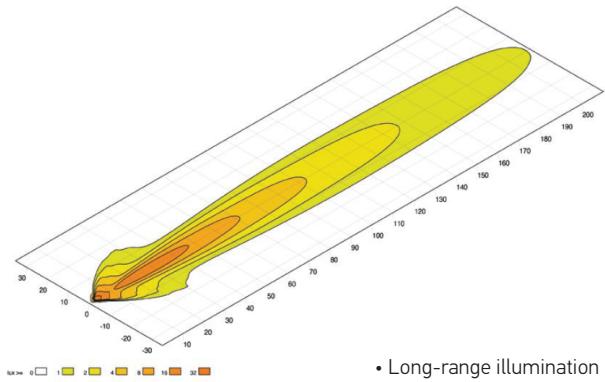

Our work lights offer flexible mounting options to optimise light distribution to meet your customers' needs. Whether mounted upright or pendant, HELLA work lights provide uniform and efficient illumination, thus enabling longer and safer working times.

We offer work lights for these areas of application:

- Close-range illumination: Ideal for working in the immediate vicinity.
- Long-range illumination: Perfect for large-scale working areasntenance

• Close-range illumination

• Long-range illumination

## Why HELLA work lights really do belong in your product range

HELLA work lights offer a range of benefits that make them the ideal addition to your product portfolio. They are easy to retrofit and are suitable for a wide range of applications. Thanks to their robust design, they can also withstand demanding operating conditions. The modern LED technology ensures high efficiency, durability and performance, while the innovative thermal management enables reliable heat dissipation. This guarantees a long service life – a convincing sales argument for your customers.

## Stringent tests for maximum reliability

HELLA attaches great importance to the quality of its products. Before they come onto the market, they undergo various test procedures. These tests ensure that the work lights function reliably even in challenging environments.

The LED work lights undergo tests such as immersion and dust tests, splash water and high-pressure jet cleaner tests and also tests for temperature and vibration resistance.

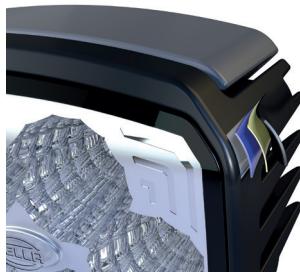

## This is what makes HELLA work lights stand out:

- Easy mounting
- Robust design in high quality
- Powerful LED technology
- Flexible models in various sizes and protection classes
- Approval in accordance with ECE R10
- Countless mounting options
- Suitable for 12 V and 24 V systems

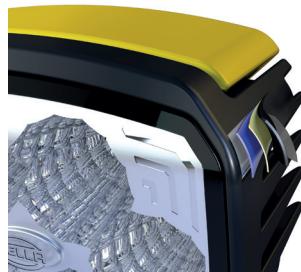

The LED work lights undergo tests such as immersion and dust tests, splash water and high-pressure jet cleaner tests and also tests for temperature and vibration resistance.

## Designed for the toughest working conditions!

Thanks to modern technologies developed using our OE know-how, HELLA work lights can withstand the most challenging environmental conditions. The headlamps' sophisticated thermal management and corrosion resistance in particular ensure a very long service life. After all, high-power illumination performance can only go unhindered if the heat can be optimally dissipated from the high-power LED headlamps. A long service life is guaranteed thanks to corrosion-resistant headlamps with special coatings or plastic housings. Go for the best quality and increase your working efficiency.

CoroSafe coating for work lights with an aluminium housing

NanoSafe coating for work lights with an aluminium housing for particularly tough applications such as mines

### CoroSafe/NanoSafe

New process to combat corrosion in aluminium housings

With its new coating processes against corrosion, HELLA is once again setting standards in the durability and toughness of work lights with aluminium housings. Two additionally implemented layers in the surface coating of the work lights greatly improve their durability. The sophisticated combination of different coating methods ensures a high level of corrosion resistance and improved protection against work light damage. This means that the housing is well-protected and ideal for use in environments with large amounts of salt and water. CoroSafe is used primarily with HELLA LED reversing lights. When using the NanoSafe coating for special applications, such as mines, an additional coating is applied. This protects against corrosion in particularly tough applications.

Innovative heat-conducting plastic housing to combat corrosion

### Compact series

Corrosion-free and lighter plastic housing

The innovative plastic housing of the Compact series boasts similar thermal conductivity properties to aluminium. This allows the LEDs to operate using the full power supply even at high ambient temperatures. Thanks to the housing's innovative plastic material, corrosion is averted and a long service life is guaranteed. In addition, the Compact scores points with its considerably reduced weight and improved vibration characteristics.

## IP protection classes

Features and descriptions

### What does IP protection class mean?

IP stands for International Protection. The IP protection classes are determined according to DIN 40 050, Part 9. The purpose of the norm is to provide an exact definition of the electrical equipment of vehicles against the ingress of solid foreign objects including dust, and against the ingress of water. The varying degrees of protection important for signalling systems are explained in more detail below.

### Protection class IP 5K4K

Dust may only penetrate to such an extent that the function and safety are not impaired. Water that is sprayed against the housing from every direction at increased pressure must not have any damaging effect.: the water pressure is approx. 4 bar.

### Protection class IP 9K

Water that is directed from high-pressure/steam-cleaning equipment onto the housing must not have any damaging effect: the water pressure is approx. 80-100 bar.

### Protection class IP 6K7/IP 6K8

Dust must not penetrate. Even during temporary (IP 6K7) or permanent (IP 6K8) submersion, no water is allowed to penetrate. HELLA products meet the highest requirements and are optimally protected against all weather conditions.

# WORK LIGHTS

## HELLA solutions for more safety and comfort in your everyday working life

Vehicle lighting plays an important role in safety and workplace convenience. There are many situations where there is still room for improvement, especially when it comes to occupational safety. For example, it is important that hazard zones can be optically marked or demarcated at any time so that everyone in the affected area can be warned and protected in good time. Previously, this had to be done by the driver or by other workers, who would manually mark off the areas concerned. This meant that it was not possible to demarcate individual areas as required in a simple, swift and safe action. With the VISIOTECH projection technology, HELLA has brought products onto the market that are designed to help in these exact situations. However, oncoming traffic should not just be warned or alerted. It is also important that it is dazzled as little as possible in order to avoid accidents caused by glare and poor visibility. That is why HELLA has developed ZEROGLARE glare-free illumination that does not dazzle oncoming vehicles.

Compare traditional illumination (left) with ZEROGLARE illumination (right)

Video clip – ZEROGLARE  
Scan, watch and find out more.

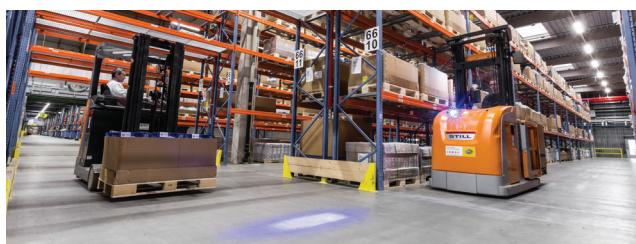

### VISIOTECH technology – Communicating with light

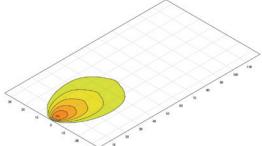

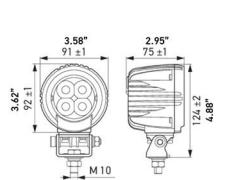

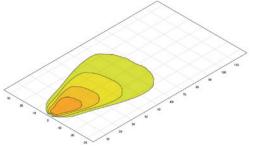

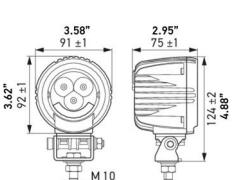

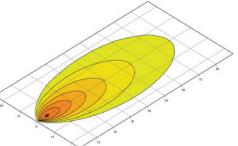

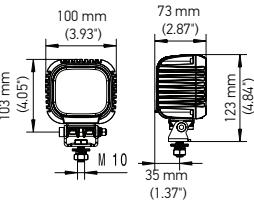

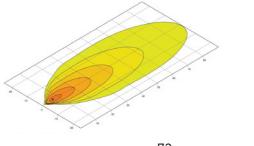

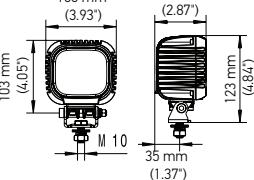

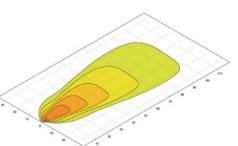

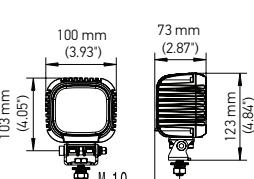

With the new VISIOTECH projection technology, HELLA allows you to communicate using light by projecting various symbols and illuminations onto the ground.

This warns other vehicles or pedestrians of an oncoming vehicle. The lines projected in front of the vehicle can also be used for easier vehicle navigation. Projecting symbols can also easily and safely mark work areas. This results in increased safety and convenience during the daily work routine.

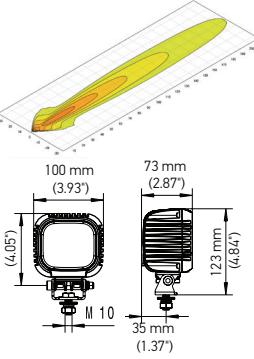

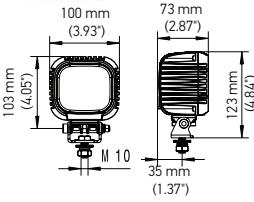

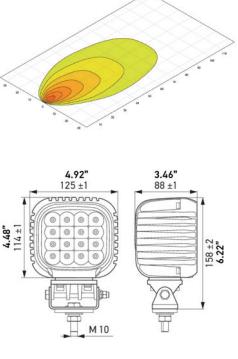

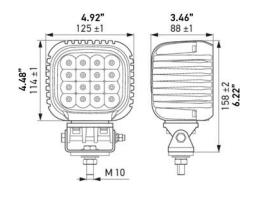

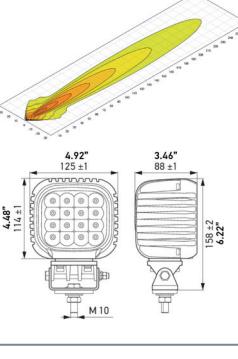

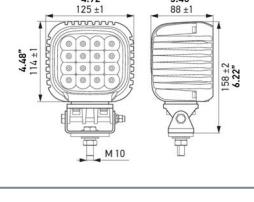

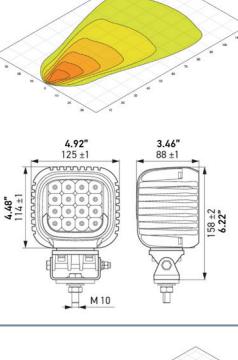

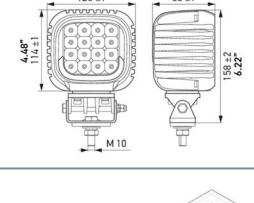

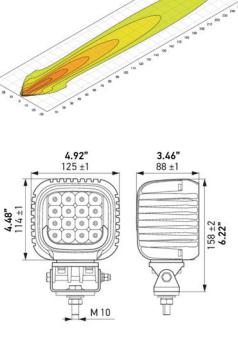

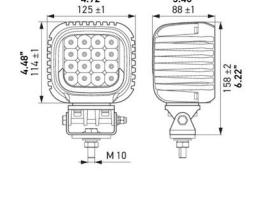

Using products with VISIOTECH technology is permitted for applications outside the StVZO (German Road Traffic Regulations). Special approvals are required for special applications on the road.

## HYPALUME

**1** CR: Close Range

**2** LR: Long Range

**3** XW: Extra Wide Flood

LED

- Developed specifically for mining and lighting tower applications
- Highly efficient light distribution
- Powerful LEDs illuminate the surrounding area for daylight working conditions
- Close Range, long range and extra wide illumination options
- Different versions from 24 VDC up to 240 VAC available
- Thermal management
- 5 year warranty

### Features

- Light output (measured): 28,000 lumen
- Power requirement: 300 Watt
- Color temperature: 5,700 Kelvin
- Housing Material: Aluminum
- Protection: Reverse polarity, transient spike circuit protection
- > 60 VDC over-voltage protection
- Connection: 4 pin DT connector
- Mounting: Heavy Duty Stainless Steel Bracket
- Approvals: RCM, FCC, CE, IP6K7, IP 6K9K (withstands high pressure cleaning)
- Soft Start at PIN3
- 5 Dimming levels at PIN 4
- Non-stick and easy to clean surface coating
- High impact Grilamid nylon lens,
- 50 G Heavy Duty stainless steel bracket
- Mounting standing / hanging.

# ZEROGLARE

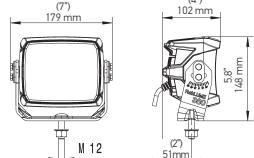

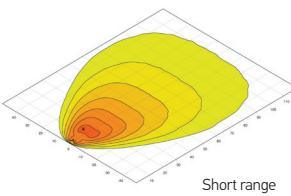

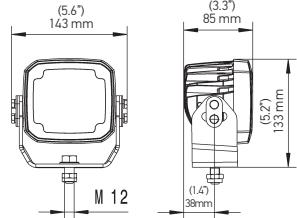

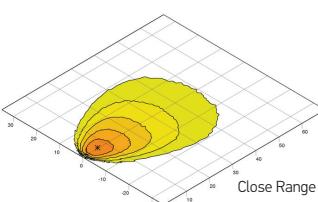

Bringing Onroad Safety to Mining

HELLA Mining has developed the **ZEROGLARE** optical system to bring the safety and comfort of highway driving to mining operations! The **ZEROGLARE** optical system ensures no light from oncoming traffic will be directed into the eyes of oncoming drivers eliminating the occurrence of discomfort or disability glare. The innovative optical system has a sharp horizontal cut off to control the light onto the ground in front of the vehicle and not into oncoming operators field of vision.

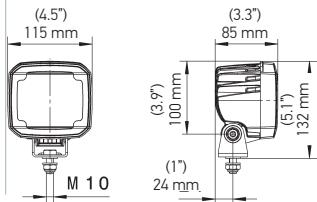

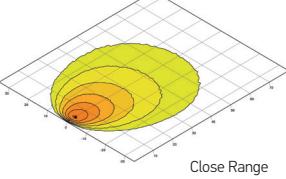

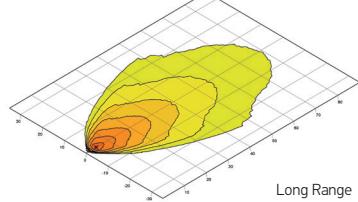

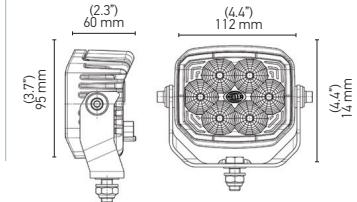

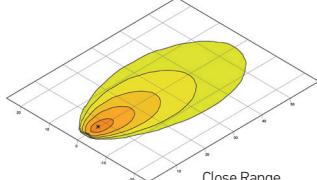

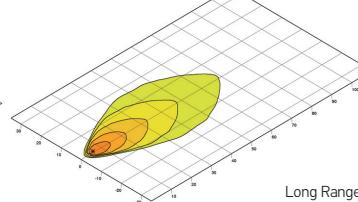

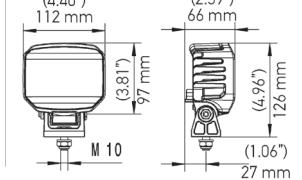

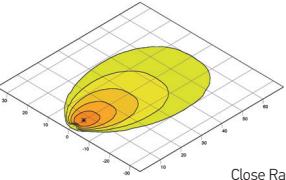

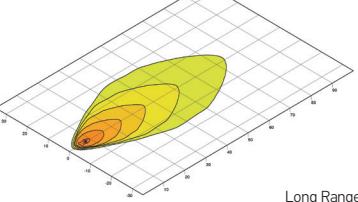

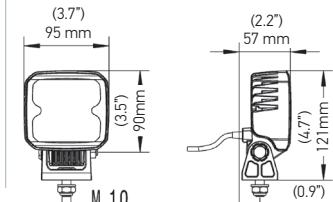

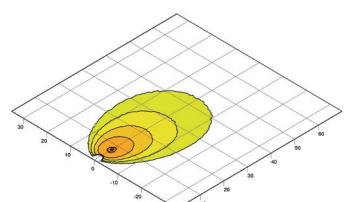

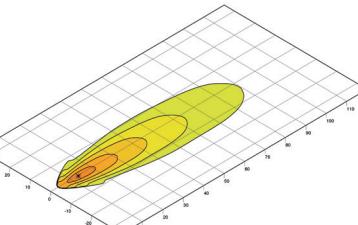

The **ZEROGLARE** optical system ensures all emitted light is directed below the horizontal plane
