

MAHLE

The comprehensive
thermal management
solution

BEHR®

Distributed by HELLA Australia

A leading Original Equipment supplier with over 100 years of OE expertise

Over more than a century, MAHLE has become a leading technology partner and a supplier of Original Equipment parts to the global automotive industry.

With an extensive Original Equipment product range that is unrivalled in terms of its breadth and depth, and covers almost every area of the powertrain, MAHLE products can be found in every second road vehicle.

With a dual research and development strategy, MAHLE is committed to finding new solutions to increase the efficiency of today's internal combustion engines, while at the same time developing highly efficient drive systems for hybrid and electric vehicles.

Supplier of Original Equipment thermal management components to:

Aston Martin	Iveco	Peugeot
Audi	Jaguar	Porsche
Bentley	Lamborghini	Renault
BMW	Land Rover	Rolls-Royce
Bugatti	MAN	Scania
Ferrari	Maserati	Seat
Fiat	Mercedes-Benz	Skoda
Ford	Navistar (International)	Tesla
Freightliner	Nissan	Volkswagen
		Volvo

A comprehensive thermal management programme, delivered in partnership with HELLA Australia

A joint venture between MAHLE and HELLA in 2005 resulted in BEHR HELLA SERVICE, a brand that subsequently established a reputation for premium quality thermal management components.

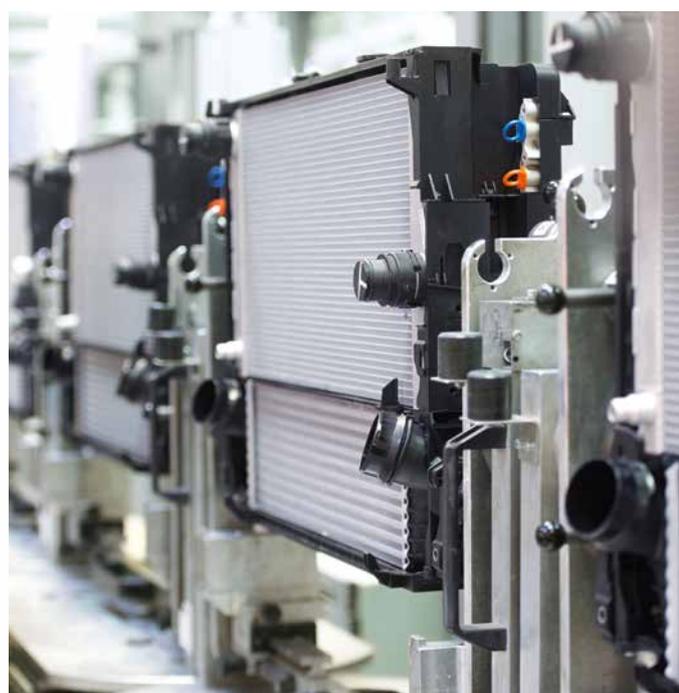

A recent acquisition of HELLA's shareholding in the joint venture company has enabled MAHLE to strengthen its thermal management offering, with BEHR components remaining an integral part of this comprehensive programme.

As an enduring legacy of MAHLE and HELLA's strong partnership, the MAHLE thermal management range is now distributed exclusively in Australia and New Zealand by HELLA Australia.

More than 3,600 premium quality parts

Comprising of more than 3,600 engine cooling and air conditioning components, MAHLE's premium quality thermal management programme is the most extensive available in the independent aftermarket.

With parts for 85 percent of current models across all vehicle applications including passenger cars, light commercial vehicles, heavy vehicles and off-highway vehicles, and a particular focus on European brands, you can be confident that MAHLE has your thermal management needs covered.

Premium Line: Premium quality parts for complete peace of mind

The MAHLE Premium Line label signifies premium quality.

Drawing on MAHLE's vast Original Equipment expertise, MAHLE Premium Line products are manufactured to precise OE specifications. They are designed and engineered to deliver the very highest levels of performance and durability, even under extreme conditions.

This level of dependability is particularly crucial for commercial vehicle fleets, where unscheduled maintenance can represent a significant expense in terms of servicing costs and vehicle downtime.

**PREMIUM
LINE**

With the same reliability and long operational life that you would expect from the original part, MAHLE Premium Line components deliver long-term value and complete peace of mind.

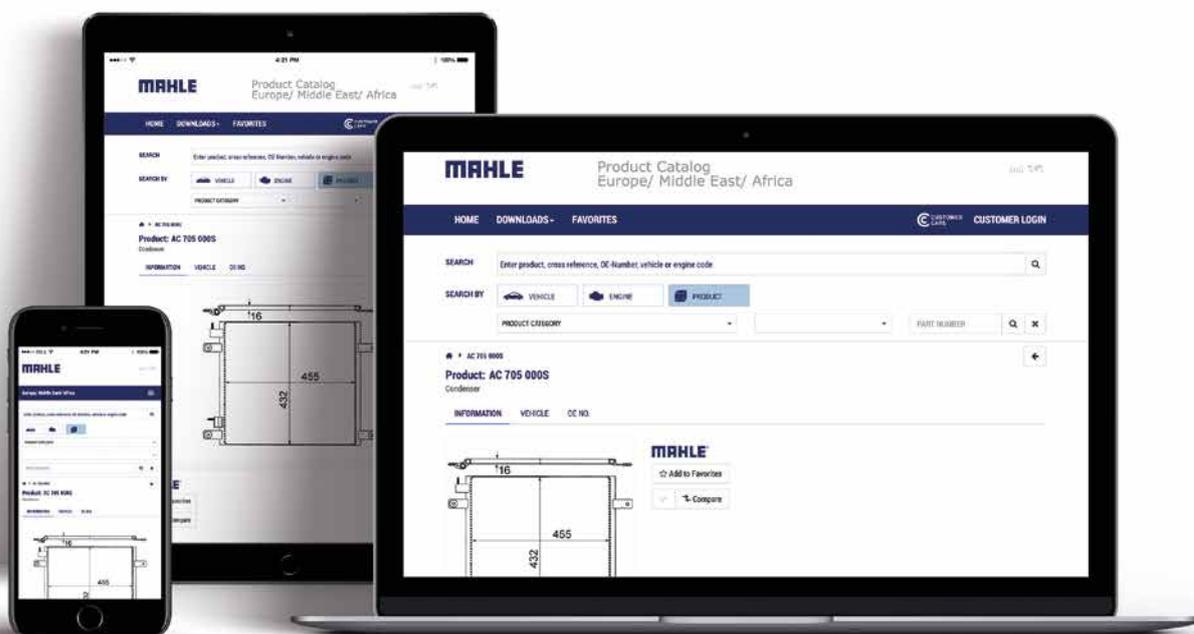

The MAHLE online catalogue.

Find the right part, fast.

The MAHLE online catalogue is a cutting-edge web-based catalogue system that contains detailed catalogue data covering the entire MAHLE product range. Search by MAHLE part number, OE or cross reference numbers, or alternatively search by vehicle or engine code.

In addition, the MAHLE online catalogue allows users to compare parts, create a favourites list, download fitting instructions and find technical announcements in the MAHLE Technical Messenger.

Engine cooling

Increasing demands to reduce fuel consumption and vehicle emissions place an even greater emphasis on efficient engine cooling.

MAHLE offers a comprehensive range of premium quality engine cooling components that are manufactured to precise Original Equipment specifications, ensuring optimum levels of efficiency for improved fuel economy, lower emissions and reliability that you can trust.

Exhaust gas recirculation coolers

Lower combustion temperature in the cylinder has a positive impact on the formation of nitrogen oxide. MAHLE exhaust gas recirculation coolers make it possible to reliably comply with prescribed NOx limits.

Coolant radiators and expansion tanks

Water pumps and kits

Cabin heat exchangers

Radiators/condenser fans

Visco® fan drives/fan clutches

Oil coolers

Intercoolers

Air conditioning

As vehicles have become increasingly sophisticated we have become accustomed to high levels of climate comfort. However, passenger car and commercial vehicle air conditioning systems have more to offer than just a comfortable ride.

They also play a key role in terms of safety by helping to keep the driver comfortable and alert, as well as preventing windows from fogging up by dehumidifying the cabin air.

A/C compressors

An A/C compressor is indispensable for temperature management inside a vehicle's cabin. MAHLE offers an extensive range of high-quality compressors, including the latest generation of electrically driven, vehicle-specific units as fitted in modern all electric vehicles.

A/C condensers

Evaporators

Filter-driers and accumulators

Expansion valves and orifice tubes

Interior blowers

A/C switches

A/C blower regulators and resistors

HELLA Australia: people driven

Established in Australia in 1961 as HELLA's first operation outside Europe, at HELLA Australia we have been serving the Australian vehicle market for more than half a century.

We remain a part of the global HELLA family and benefit enormously from the unparalleled expertise within the wider group, whilst enjoying the autonomy that has enabled us to develop an organisational structure to best meet the unique requirements of wholesalers, workshops and off-highway end-users across Australia.

At the heart of our ethos is a commitment to developing supportive and mutually-beneficial relationships with our customers, and to invest in the professional development of our HELLA colleagues across Australia.

Our aspiration: To keep Australia moving, safely.
