- Premium quality from the world market leader for exhaust systems – Faurecia partnered with HELLA
- All-in-one KIT: Including installation accessories and installation instructions
- Coverage: Passenger cars and light commercial vehicles, 28 vehicle brands
- Easy assembly – can be done by one person

PRODUCT FEATURES

Easy2Fit® exhaust system KITS

Cumbersome transport, complex storage and difficult installation: exhaust systems present a number of logistical challenges for the aftermarket. To reduce not only the risk of damage to goods but also transportation costs, Faurecia Service has developed the Easy2Fit® product line: thanks to the innovative system, spare parts for exhaust systems (such as DPFs, catalytic converters, silencers or pipes), including installation accessories, fit into a handy box standardised for Euro pallets.

These high-quality exhaust system kits not only facilitate ordering and logistics, but above all they increase efficiency in the workshop.

Benefits of exhaust pipe KITS - Easy2Fit®:

- All-in-one: Including installation accessories (e.g. clamp, silent blocks, etc.) and installation instructions.
- An easy-to-fit exhaust pipe KIT with all installation accessories.
- Easy to assemble: Parts with a length of 60 to a maximum of 120 cm can be mounted by just one person.

The Easy2Fit® KITS meet all quality standards of the OE industry with regard to vibrations, heat stability, leakages, noise development and durability. Tests are carried out at the Faurecia Test Centre in Bavans, France (certified: EN ISO 1400 as well as IATF 16949, including DIN EN ISO 9001: 2015).

LOGISTICS

Over 26,000 OE applications can be covered by approximately 3,300 different exhaust system kits across four product groups (DPF, catalytic converters, silencers, pipes). This reduces costs related to space and storage and streamlines logistics. In addition, there is only one part number **per assembly kit**. This not only optimises logistics but also creates a more efficient ordering process. This significantly lessens your workload as a wholesaler.

Furthermore, the cardboard boxes are suitable **for automated platforms**. They are also characterised by being particularly secure during transportation. Compared to conventionally packed exhaust systems, the damage rate during transport is reduced by up to 50%. Furthermore, diverse items can be placed on Euro pallets.

Easy2Fit®: ALL-IN-ONE EXHAUST PIPE KITS

Easy-to-fit premium-quality exhaust pipe kits, including the necessary installation parts for easy ordering and installation.
