

All-round calibration animated by Hella Gutmann

- **Calibration essentials in a 5-minute video**
- **Valuable decision-making aid for investments**
- **Training support for initial and advanced training as well as customer information**

Ihringen, 29 April 2020. Word has now also reached the end customer: driver assistance systems must be calibrated. However, the wide variety of systems and the different approaches of vehicle manufacturers leave many questions unanswered. Which systems must or can be calibrated statically? What are the main steps? Which sensors must be activated, adjusted or measured and what are the tools used for this purpose? Hella Gutmann provides answers to these questions in a 5-minute video clip.

Focused on the essentials, the technical animation guides the viewer through the different calibration steps around the vehicle. In the captivating video, the viewer follows the calibration procedure for front camera, front radar, laser scanner, all-round vision camera, rearview camera and all-round vision radar sensor. As if by magic, the required tools move to their correct positions before the calibration is initiated with the mega macs diagnostic tool.

The entertaining clip provides hands-on information for workshop procedures and training. Played on a screen in the waiting area, the clip is bound to impress customers with the calibration competence of their workshop.
