

HELLA introduces new Modular Lightbar to the market for municipal vehicles

- **LED technology ensures optimum signalling effect as well as homogeneous illumination of the working area**
- **Various sets available with additional functions such as Alley Light and warning lights**

Lippstadt, 23. September 2021. Municipal emergency vehicles are operating day and night to provide the safety required on the roads. Individual beacons are often insufficient for warning other road users in good time when work is taking place and for optimally illuminating the work area. Therefore, the lighting and electronics expert HELLA ensures maximum safety and high recognisability in practice with its portfolio of optical and acoustic warning systems. The company is now launching a product innovation called the “Modular Lightbar”: the particularly flat roof bars enable an effective warning signal with an amber double or triple flash pattern. Various individual modules can also be integrated.

The Modular Lightbar is available in three different lengths for the product launch. All variants consist of a middle part and two side parts, which are equipped with warning lighting. The variant with a length of 1,219 millimetres also has integrated Alley Lights that are used to illuminate the areas next to the vehicle. Depending on the set, there is space for various individual modules in the middle section. For example, a work light for optimum illumination in front of or behind the vehicle, modules with an amber warning light, or a tail-stop-direction indicator module can be integrated. The latter can be connected to the vehicle. When the vehicle's direction indicator lights up, the Lightbar module also flashes for better visibility. The individual modules are available as spare parts on request, meaning that they can be easily replaced if necessary.

The Modular Lightbar also has a compact design. With a height of 52 millimetres, the roof bar is particularly flat. It can either be screwed directly onto the vehicle roof or attached using a bracket included in the scope of delivery. Depending on the set, it is
