

Renault Espace-IV- Electric parking brake with control element and hand-brake cables | HELLA

Renault Espace-IV, model year 2002-2014

Electric parking brake with control element and hand-brake cables

General information

Before repair work begins on the rear axle wheel brakes of the vehicle models mentioned above, the electric parking brake must be emergency-released or deactivated.

Emergency release

Carry out the following steps for emergency release:

- Switch on the ignition
 - Put the automatic transmission in the "P" position
 - Release the parking brake
- To do this, press the release button and actuate the release pushbutton switch
- Switch off the ignition and withdraw the Renault chip card
 - Open the center flap between the front seats
- Pull hard on the emergency release (yellow lever)
- The slackening of the cables produces an audible noise
- Unhook the control cables at the brake calipers
- Avoid placing mechanical loads on the cables with your tools

Note: The emergency release/the control element of the electric parking brake will automatically reset to its working position the next time the EPB switch is pressed.
