

## Clean, clean! Fuel filtration redefined.

Agricultural and construction machinery are usually exposed to extremely dusty environments, making the need for reliable filters all the more important.

Fuel filters are indispensable in protecting the injection system and engine from contamination. The requirements for diesel filtration keep growing. The filters should remove water and the smallest

of particles effectively – and be able to handle the widely varying fuel qualities around the world. The Blue.maxx fuel pre-filter from Hengst is the smart solution.

## Search conveniently, find what you need instantly.

In the online catalog or using the app.

Employees in the parts industry or in workshops often lack the time to comfortably search for suitable spare parts. Currently, there are over 2,600 types of Hengst filters available online. But despite the large number of products, we still manage to maintain a clear overview: Hengst's modern online catalog makes it very easy to find the right filter and dealer in your immediate vicinity, thanks to the integrated route planning.

The Hengst online catalog app:

## Work smarter.

Wide range of service parts in OEM quality  
for agricultural and construction machinery.

Agricultural and construction machinery

## Clean and fuel efficient. Fluid management for EU Stage V applications.

The EU Stage V emission standard massively lowers the emission limits set for agricultural and construction machinery. The new limits are a technical challenge for manufacturers. Hengst's innovative filtration solutions, which help improve fuel efficiency and lower emissions, are already in use today.

### Oil coolant module for the OM471/473 engines

Hengst supplies the oil-coolant module for the Heavy-Duty Engine Platform (HDEP) from Daimler Trucks. Essential components, such as the die-cast aluminum housing, plastic injection-molded parts, and the integrated oil filter element are manufactured entirely in-house.

### Oil module for TTCD 4.1/6.1 engines

Hengst has developed a fluid management module for Deutz which finds in the TTCD (Agri) 6-cylinder in-line engines with turbocharging application. The module consists of an oil filter, heat exchangers, valves, sensors, and a coolant pump. The system of over 50 components comes in a compact, light-weight design with tremendously low air-flow resistance, to foster fuel efficiency and reduce emissions.

### Oil coolant module for the OM936 engines

Hengst's module for the Medium-Duty Engine Platform (MDEP) from Daimler Trucks consists of an oil filter, heat exchangers, valves, sensors, and a coolant pump. The system of over 50 components comes in a compact, light-weight design with tremendously low air-flow resistance, to foster fuel efficiency and reduce emissions.

## Simply stronger. Stack filters from Hengst.

Stack filters from Hengst combine robustness and reliability with a compact design and the best-possible filtration performance. The unprecedented filter design is tailored to the increasing demands of modern engines used in agricultural and construction machinery.

## Premium market quality. Pays off for you and your customers.

It is in the nature of things: The original doesn't come around a second time. And that is why the Hengst filter brand is unmistakable in the global Independent Aftermarket.

As original equipment manufacturers and development partners with well-known vehicle and engine manufacturers, we implement innovative ideas in the best quality. Our comprehensive product and material knowledge puts us in a position to set standards again and again in the Aftermarket. For you, this means: We supply high-quality, high-performance OEM filtration solutions for agricultural and construction machinery.

**We offer you a comprehensive range of consistent, top-quality service parts ranging from classic filter inserts to sophisticated special applications. And that pays off for you and your customers!**
