

# Mazda 6 - Motoren kan ikke starte | HELLA

**Mazda6 (GH)Årgang: 2008-2012Motoren kan ikke starteHvis motoren i ovennævnte model ikke kan starte, og displayet forbliver mørkt, kan årsagen være en defekt stelforbindelse (se markering på fig. 1).Fig. 1.Det er muligt, at forbindelsen i stelpunktet ikke er korrekt fastspændt. Dermed er der ikke god kontakt mellem stelledning og stelpunkt.Fejlen afhjælpes ved at kontrollere forbindelsen og evt. rense den. Derefter skal forbindelsen fastspændes korrekt iht. producentens anvisninger.**

**6 (GH)**

**Model year: 2008-2012**

**Engine will not start**

If the engine in the above vehicle will not start and the display remains dark, the reason may be a faulty earth connection (see marking, image 1).

Image 1

It is possible that the connection to the earth pin was not secured properly. This means that clean contact between the earth cable and the earth connection pin cannot be guaranteed.

## **Important safety note**
