

Nissan Micra - Motoren går i stå under kørslen | HELLA

Nissan Micra (K13) / Note (E12) Årgang: 07/2015 - 01/2016 Motor: 1,2 DIG-S (HR12DDR) Motoren går i stå under kørslen For de ovennævnte modeller klages der over, at motoren går i stå under kørslen og ikke kan startes igen. Årsagen kan i dette tilfælde være en kortslutning i tændspolen. Kortslutningen kan medføre skader og svigt i sikringerne, hvorved motoren går i stå og ikke kan startes igen. Reparationsvejledning: Bilfabrikanten har allerede taget sig af problemet, og brugerne af de berørte biler er underrettet. Det må dog antages, at ikke alle biler er blevet kontrolleret eller repareret. På værkstedet monteres nye tændspoler i de berørte biler.

Micra (K13)/Note (E12)

Year of construction: 07/2015 – 01/2016

Engine: 1.2 DIG-S (HR12DDR)

Engine stalls during driving

In the vehicles listed above, there have been complaints of the engine stalling during driving and refusing to start again.

In this case, the aforementioned problem may be caused by a short circuit in the ignition coil.

The short circuit can damage the fuses and cause them to fail, which can cause the engine to stall and prevent it from being started again.

<u>Repair note:</u>

The vehicle manufacturer has already addressed the issue and notified the owners of all the affected models.

However, it can be assumed that not all vehicles have been inspected and repaired.

Specialist garages will install new ignition coils in the affected vehicles.
