

Mazda 6 - El motor no arranca | HELLA

Mazda

6 (GH)

Fecha fabricación: 2008-2012

El motor no arranca

Si en el vehículo arriba mencionado se detecta que el motor no arranca y la pantalla informativa se queda apagada, puede deberse a una conexión defectuosa a masa (véase marca, imagen 1).

Imagen 1.

Puede suceder que la conexión al punto de masa no se haya fijado correctamente. Por esta circunstancia no puede garantizarse un contacto limpio entre el cable de masa y el punto de conexión a masa.

Important safety note

The following technical information and tips for practical use have been set up by HELLA in order to offer professional support to automotive workshops in their daily work. The information available here on this website is only to be used by appropriately trained specialist staff.
