Dacia Logan MCV - Loss of power, engine stalls | HELLA

Dacia

Logan MCV

Model Year: 2006 – 2013

All gasoline engines with throttle valve controller

Loss of power, engine stalls

If the above-mentioned problem occurs, the cause could be a contaminated throttle valve.

The functioning (opening / closing) of the throttle valve can become impaired as a result of contamination (carbonization).

Remedy:

- Dismantle and clean throttle housing as per manufacturer's instructions
- Re-install the throttle housing in reverse order to the way in which it was dismantled
- If necessary, throttle valve to be taught in as per manufacturer's instructions
