| HELLA parts to replace | 6PP 358 139-261                       |

### Important safety information

## The tyre pressure warning lamp cannot be reset

In the case of the vehicle mentioned above, it may happen that,

following a repair to the tyre pressure monitoring system or a wheel change, the tyre pressure warning lamp cannot be reset and therefore does not go out.

One possible cause in this case may be that the tyre load

(Light/Ecco/Max) has not been set or saved in the instrument cluster.

This can be changed using the left-hand combination switch/indicator lever on the steering wheel as follows.

(Light, Ecco, Max)

Then confirm the setting on the indicator lever using the Set/Clr button.

** Please note**

We recommend that, whenever you adjust the tyre pressure to suit the vehicle's load condition, you also adjust the setting on the instrument cluster.
