

Audi A3 from model year 1997

Starter keeps running, ignition switch cannot be turned back.

If there are complaints with these vehicles that the ignition switch cannot be turned back after the start and the starter keeps running, one possible cause is the ignition switch. A broken switch wheel in the ignition switch jams the ignition lock in the start-up position and prevents it from being turned back.

To eliminate the fault the ignition switch has to be replaced and the starter checked and replaced if damaged.
