

Actros combination rearlight 2VP 007 500-521 with backup alarm

Brief
Information

Rear Lighting

In Austria and England vehicles of the classes N2, N3 and M3 (= commercial vehicles/buses) have had to be equipped with backup alarms, which have nighttime switch-off, since the beginning of 2005.

Backup alarm with nighttime switch-off. Daimler equips series-production vehicles in these countries with backup alarms. Due to increased demand from the IAM, we have extended our range by a version with backup alarm for right-hand traffic.

The number of lights sold in the OE/OES business is so small that it is not worth including a light with backup alarm for left-hand traffic in our range.
