Spotlight, 12 V / 24 V (ECE Ref. 37.5)

1F1 009 094-041

LIGHT DISTRIBUTION

ECE Ref. 37.5

Mounted: upright

Lux is the unit of illuminance.

It expresses the luminous flux from the light source that impinges on a specific area. For example; an office should be illuminated with at least 500 lux, and the human eye can still read a newspaper without any problems at 1 lux. The values under the lux axis show where the respective illumination intensity is achieved in the light distribution diagrams.

Ref. 50, 40, 37.5, 17.5 and 12.5:

The reference number (Ref.) is a value which refers to the spotlight. According to ECE ruling, this reference number must not exceed the upper limit of 100 per vehicle. This figure includes the values for the two standard high beams (left and right headlights) plus those of any other installed spotlights. The appropriate value is engraved on the lens of each approved headlight.
